Roland Introduces Control Support Between the V-80HD Direct Streaming Video Switcher and the Yamaha DM3 Series Digital Mixing Consoles

V-80HD Version 1.1 Enables Control of DM3 Scenes and Audio Functions via a Network Connection

Los Angeles, CA, June 11, 2025 — Roland Professional A/V (InfoComm 2025, Exhibit Hall Level 2, Booth 3261) announces integration between the [V-80HD Direct Streaming Video Switcher and the Yamaha DM3 Series Digital Mixing Consoles](#). With the free V-80HD Version 1.1 software update, V-80HD users can control various DM3 functions via a simple network cable connection.

Roland's V-80HD is a compact and powerful video switcher with an all-in-one design and flexible I/O features that support 3G-SDI, HDMI, USB 3.0, and LAN (RTMP/SRT) connections. Used by many professionals, the next-generation Yamaha DM3 Series offers superb audio quality, fast setup, easy operation, and deep features for live sound, streaming, and music production—a combination unmatched in any other mixing consoles of their size.

The V-80HD Version 1.1 update provides control integration between these two products, enabling more efficient operation by a small team or a single user. DM3 scene memories, audio faders, and mute controls can be operated from the V-80HD, streamlining video and audio operations. Configuration is easy, requiring only IP address settings on each device. No DM3 firmware update is needed for this functionality.

"We are thrilled to announce the collaboration with Yamaha," says Kohei Hattori, General Manager, Roland Live Production Business Department. "This control integration with the popular V-80HD and highly valued DM3 Series will help elevate production quality and operator efficiency."

"We are pleased to announce this new collaboration with Roland, which significantly enhances the workflow for live and streamed video, where high-quality sound and video images are equally important," says Thomas Hemery, Senior General Manager of Yamaha's Professional Solutions Division. "The integration between the DM3 Series and V-80HD video switcher delivers efficient, straightforward operation for one operator, making superior streaming productions very accessible."
