Roland Announces V-1HD+ Remote iPad App

Switch video and mix audio, specify video effects, recall eight preset memories, and more

Hamamatsu, Japan, June 3, 2021 — Roland's Professional A/V division announces the [V-1HD+ Remote iPad App](#) for remotely controlling the Roland [V-1HD+ HD Video Switcher](#). Instead of making settings on the unit or taking up the preview monitor, users can control most of the functions in real-time with the V-1HD+ Remote from an iPad.

The V-1HD+ Remote lets V-1HD+ owners control a multitude of features from the convenience of their own iPad touch screen like switching video and mixing audio, specifying the video effect assigned to each video bus, changing audio volume levels, adjusting the degree of effects applied, triggering external video recorder, saving and recalling eight preset memories, adjusting the output video, making system settings, and much more.

The Roland V-1HD+ HD Video Switcher is the latest addition to the company's V-series lineup of multichannel HD video switching products. Building on the popular V-1HD four-channel switcher, the V-1HD+ provides a deeper feature set for advanced switching applications while maintaining the simple operation, professional performance, and rugged reliability that's made the V-1HD a favorite of users around the world. Offering versatile HDMI I/O, deep control options, essential monitoring tools, and 14-channel audio mixing with legendary Roland sound quality, the V-1HD+ is the ultimate compact A/V switching solution for serious visual storytellers.

From live events and business conferences to education settings and houses of worship, the V-1HD+ is inspired by the need for today's creators to do more. Four HDMI inputs are available for mixing a variety of video sources, including cameras, presentation computers, tablets, and gaming consoles. And with built-in scaling on Input 4, users can automatically sync and calibrate troublesome video sources without external gear. Two independent HDMI outputs are also provided for professional production versatility.
